

DECLARATION OF ZERO ODP AND FORMALDEHYDE E1 COMPLIANCE

14th September 2020

To whom it may concern

Autex understands the importance of eliminating harmful chemicals from natural and indoor environments and continuously strives to improve the impacts of its products.

Our thermal and acoustic products are manufactured using 100% PET and no formaldehyde, or any other harmful materials, are added during production or post-production processing. Our non-woven textile products which are used as wall coverings and ceiling tiles, inherently meet BREEAM formaldehyde emission level requirements (Hea 02) and Green Star zero ODP requirements. In both manufacture and composition, our products do not contain any binders or resins, formaldehyde (NAF) or urea formaldehyde (NAUF), fluorinated chemicals, including perfluorinated compounds (PFCs), perfluorooctanoic acid (PFOA), halogenated chemical treatments (Bromine, Fluorine, Chlorine), Chlorofluorocarbons (CFCs) or Hydrochlorofluorocarbons (HCFCs). The products do not have any ozone depletion potential.

I trust this gives you assurance that Autex takes the environmental impacts and the health of its products very seriously. Autex is deeply committed to minimising the impacts of its products as well as the health and wellbeing of the people using our products for their indoor environment. Please share this declaration to the project Assessor. We wish you the best of luck with your green building project and are happy to provide any further information if required.

Yours sincerely

Aidan Hill
Group Technical and Sustainability Manager
