

DECLARATION OF RECYCLED CONTENT

FLOTEX TILES

We declare that the recycled content of our Flotex Tiles product is approximately 44 % (of the total product weight).

This recycled content is contained in the backing of the tiles. The waste streams to produce this are a combination of:

- Post industrial waste from our own processes
 - Edge trim
 - Imperfect product
 - Raw material / in process off cuts and batch ends
- Post industrial waste from other factories within the Forbo group – including all of the above
- Post industrial waste from non Forbo flooring companies
- Post fitting waste (off cuts)

The recycling process has been developed over the years to utilise all of the above in a range of specific combinations.

All of our processes are regularly audited by a range of bodies to ensure our compliance to many global and country specific standards.

On behalf of Forbo Flooring UK Limited

Brent Greenway – Operations Director
